Luis Eduardo Callejas Rodríguez

Agile Coach | Speaker at Cognify Services
Cancún

Extracto

I'm a software developer with 3 years of experience in web development and corporate development. I have worked in custom software development for important costumers such as Aeroméxico Cargo, Santander, Tecnotabla, Funnix mx, and Arpapel. Actually I'm Agile Coach.

Until recently, I directed the development of Funnix MX, a platform of products and services for social events. In this position, I focused on the B2B2C sector, although in the past I have done a great variety of B2C jobs.

My co-workers know me as a developer and a very competitive team leader who can always be trusted to present quality results. I spend a lot of time improving the solution requested by the client and I do my best to collaborate with others.

I am a graduate of UNAM (National Autonomous University of Mexico) and I studied at the UNNOBA (National University of the Northeast of the Province of Buenos Aires).

I have a couple of certifications in agile methods and I am currently working as a agile coach of these methods looking for my professional and personal growth.
